ABOUT ME

A motivated Computer Science student seeking a Software Engineer position. I have practical experience building web apps with Next.js, mobile apps with Flutter, and automating tasks using Python. I am a fast learner, ready to contribute to a dynamic team and grow my skills in a real-world environment.

EDUCATION

RANGSIT UNIVERSITY

Bachelor of Computer Science

2023 – Present

GPA 3.62

LANGUAGE

- English (Moderate)
- Thai (Native)

SKILLS

Programming Language

- Python
- Javascript
- Java
- Dart

Web & Mobile Development

- Next.JS
- Flutter
- React
- HTML/CSS

Backend & Databases

- Supabase
- PostgreSQL
- Firebase
- Node.js

Tools & Platforms

- Git
- Github
- Vercel

ACDEMIC PROJECT

○ Car Rental Management Platform

Developed a full-stack web application that allows users to browse available vehicles and manage reservations seamlessly. Implemented an administrative dashboard and secure booking workflows using React, Node.js, and MySQL, enabling efficient tracking of vehicle inventory and rental transactions for the business.

○ HoPak - Apartment Management System

Developed a full-stack property management application using Next.js, React, and Supabase to streamline owner operations. Implemented role-based access, automated utility billing, and a tenant behavior scoring system. Designed a responsive Vanilla CSS interface and managed PostgreSQL databases to seamlessly handle room assignments, maintenance tracking, and invoicing.

○ Employee Attendance Mobile Application

Developed a cross-platform mobile application utilizing Flutter and Dart to streamline employee attendance, location tracking, and profile management. Engineered a highly interactive GPS-based check-in and check-out system leveraging device location services and geocoding to accurately verify employee presence. Integrated Firebase Cloud Firestore and Storage for real-time data synchronization and media handling, while implementing persistent user sessions and custom UI components to ensure a seamless, secure, and responsive user experience.

○ Automated Invoice Processing & RPA System

Engineered a Python-based RPA system to automate invoice processing from Gmail using PyTesseract OCR and Regex for data extraction. Built an end-to-end pipeline that generates formatted Excel reports via OpenPyXL, runs on an hourly schedule, and triggers real-time webhook notifications.
